Olympia, Washington

OFFICE OF
FINANCIAL
MANAGEMENT

Preface

Population Trends provides current demographic data for the state, counties, cities, and towns. April 1 population determinations developed by the Office of Financial Management are the official state population figures. Annual population figures for Washington's cities, towns, and counties have been developed and released for over two decades. These estimates are cited in numerous statutes using population as a criteria for fund allocations, program eligibility, or program operations. Recent legislation specifies the use of the Office of Financial Management's April 1 population estimates as a criteria for determining county participation in the Growth Management Act.

The 1991 population estimates for cities and towns presented in Table 3 will be used in the allocation of state revenue beginning January 1992 (RCW 43.62.030). The 1991 estimates of population in unincorporated areas will be used to allocate liquor profits to counties beginning September 1991 (RCW 66.08.200) and liquor excise tax revenue beginning October 1991 (RCW 82.08.170).

The population figures shown represent all the persons who usually reside in the area designated. **This includes military personnel, military dependents, persons living in correctional institutions, persons living in nursing homes, and other care facilities. College students are considered residents of the place where they live while attending school. Seasonal populations, such as vacationers or migrant farm workers, are considered residents of the home they consider their usual residence. Persons without a usual residence are counted as residents of the place where they are located on April 1.**

Should you have any questions or suggestions regarding the content of this publication, please contact the Forecasting Division of the Office of Financial Management at (206) 753-5617.

Special thanks are given to the following persons and agencies for their continued help and cooperation in the annual publication of Population Trends: the Center for Health Statistics, Health Information Division, Department of Health, for supplying vital statistics data; the Office of Research and Data Analysis, Department of Social and Health Services, for providing selected institutional population counts; the Department of Veterans Affairs, for furnishing veteran institutional counts; the housing directors of the colleges and universities, for submitting April 1 dormitory counts; the armed forces personnel at major bases in the state for contributing data on current resident military counts; and all of the city staff, and county and regional planners for providing data used in the development of the April 1 population estimates.

STATE AND COUNTY POPULATION SUMMARY

- Population estimates are developed as accurately as possible from standard and tested methods. Specific procedures used depend on the availability of state and local area data. The state estimate is developed by a component method.

- In the component method, the population age 64 and under is developed from vital events and an estimate of net migration based on school-age migration. Population age 65 and over is developed from medicare data. The state estimate for 1990, ten years out from the last actual population count, was within 1.4 percent of the 1990 federal census count for Washington.

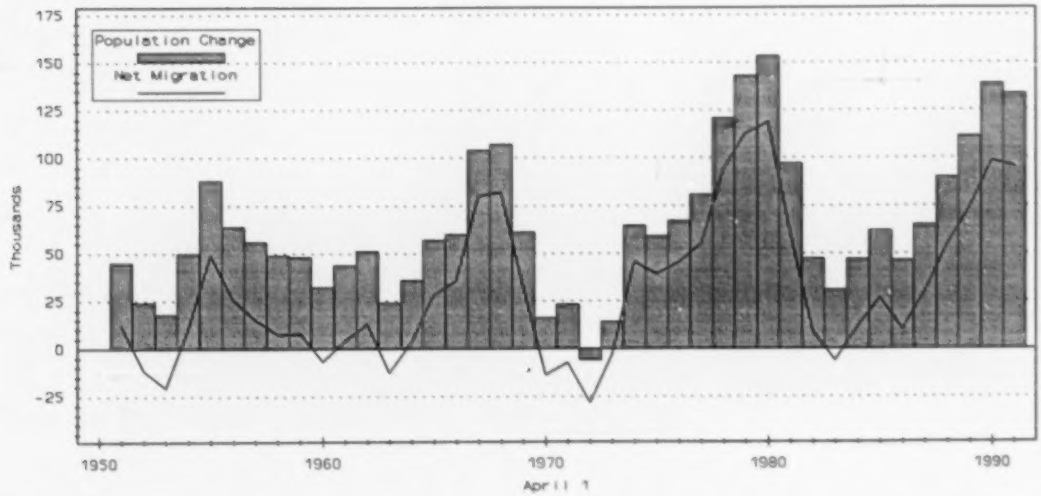
- Population estimates for counties are developed by three methods. The component method described above, ratio correlation, and the housing unit method. Ratio correlation relates the change in population to the changes in a set of symptomatic data over the last decade. The current equation contains school enrollment, voters, auto registrations, and employment. Changes in the symptomatic data are then tracked annually over the next decade to estimate population. The housing unit method estimates population on the basis of housing change and assumptions about occupancy rates and average household size. The average absolute error in the 1990 county estimates, when compared to the 1990 census counts, was 1.9 percent.

- On April 1, 1991, Washington's population reached 5,000,400, an increase of 2.6 percent over the 1990 census count. Even with a slowing of the state's economic growth beginning in early 1990, population growth for the 1990-91 period nearly matched the 1989-90 growth rate of 2.9 percent.

- While annual growth and growth rates for the state continue to be variable and reflect the state's economy, population change for each decade shows strong growth: 19.6 percent for the 1960s, 21.1 percent for the 1970s, and 17.8 percent for the 1980s.

- Births, deaths, and migration are the drivers of population change. The increase in Washington's population due to the surplus of births over deaths, often referred to as natural increase, tends to be consistent over time. Natural increase accounts for over half (54 percent) of the state's growth from 1980 to 1990.

Figure 1
Population Change and Net Migration
State of Washington, 1951 to 1991



- Migration is the most variable and difficult component of population change to estimate or predict. Migration primarily reflects population movement induced by economic opportunities. Washington exhibits a cyclical pattern of migration associated with expansions and contractions in the state's economy.
- At the state level, estimates of net migration (inmigration minus outmigration) are developed by annual tracking of school-age migration and wage and salary employment change. Net migration gains during periods of rapid economic expansion usually far exceed prior population losses. Washington experienced net migration losses during the early 1980s, but by 1989 and 1990 annual gains approximated 100,000 per year. For the 1980s, net migration accounted for 50 percent of the state growth.
- Most of the state's growth over the last decade has been concentrated in the large metropolitan counties bordering on Puget Sound. Population gains in King, Kitsap, Pierce, Snohomish, and Thurston Counties accounted for 70 percent of the state's total increase of 734,339 between 1980 and 1990.
- Throughout the 1970s, three-quarters of the state's population lived in Western Washington. Since 1980, however, the proportion of the population in Western Washington has increased to nearly 80 percent.

Notes: Corrected census counts for 1970 and 1980. Estimates for 1981 to 1989 are provisionally revised based on 1990 federal census population data.

Vital events data are calendar year for 1920 to 1940 and April-to-April for 1950 to 1990. Vital events are estimated for January 1990 to March 1991.

Rates are calculated per 1,000 midpoint population and computed on unrounded numbers.

Vital events are estimated from April 1990 through March 1990. Detail may not add due to rounding.

OFM/Forecasting 8/91

CITY, TOWN, AND COUNTY POPULATION AND HOUSING

City and County Population and Housing

- Population determinations shown in Table 3 for cities and towns are both estimates and actual population counts. Each year, about thirty cities elect to conduct a census for their annual population determination. Estimates are prepared for the remaining cities using the housing unit method.

- The Housing Unit Method builds on the most recent federal or special census taken for a local government. The assumption is that people usually live in homes or in some type of group living facility such as a college dormitory, social house, military barrack, nursing home or other long term care facility, or a correctional institution. Homeless persons are counted as part of the group quarters population. Persons living in houses plus persons living in group quarters equal the total population of an area. Persons who reside at more than one house are generally considered a resident of the place where they spend the majority of the year.

- Each year, cities report the changes in their housing stock, including changes due to annexation. An estimate of the population in housing is developed by applying an occupancy rate and average number of persons per occupied unit to the updated housing stock in each jurisdiction. Changes in group quarter populations since the last census is obtained by contacting each facility.

- The reliability of the housing unit estimation method depends on accurately determining all of the factors required in the calculations: the current housing stock, the occupancy rate, and average household size. When compared to the 1990 census, the average absolute difference between the Office of Financial Management's 1990 city and town estimates was six percent. Differences generally ranged from one to three percent for cities of over 100,000 population to differences of from 7 to 10 percent for places less than 500 population.

- Federal and special counts provide more than a glimpse of a local jurisdiction's population at one point in time. Counts provide benchmark data on the number of housing units, the occupancy rate, and the average number of persons per occupied house. In practice, average household size is usually trended based on the change in household size between the last two census points. The occupancy rate at the last census point is usually used in developing the population estimate. Sometimes more recent occupancy data may be available, but extreme care must be used because most occupancy surveys do not cover all housing units in the estimation area or use a similar definition of occupancy.

- Cities are ranked by their 1990 population size in Table 4, with their 1980 rankings provided for comparison. Most of the large changes in rankings are due to annexation or incorporation. Table 7 provides specific information on municipal boundary changes in Washington.

- Cities and towns now represent approximately two percent of the state's total land area and contain 51 percent of the state's population. This results in a population density of 2,125 persons per square mile compared to only 37 persons per square mile for the state's unincorporated area.

- Territorial expansion and new incorporations are a major source of incorporated population growth. Municipal boundaries expand to include more people, or to encompass undeveloped land that is later subject to development. Between 1980 and 1990, annexations added 145.3 square miles to cities and towns. The incorporation of Mill Creek, SeaTac, and Federal Way added another 23.4 square miles. At the time of annexation or incorporation, nearly 150,000 people lived in the newly incorporated areas (Table 7).

- OFM is responsible for certifying all municipal annexations. Municipalities must conduct a census of all population and housing in annexed areas.

- State certified annexations are required by many state and federal agencies. Geographers at the Bureau of the Census and the Washington State Department of Transportation use the certified data to update municipal boundary maps.

- From 1980 to 1990, more than 75 percent of Washington's 268 cities and towns made boundary changes. Annexations and incorporations added 168.7 square miles to the total incorporated land area.

- From 1990 to 1991, cities and towns annexed 52.17 square miles and 30,157 persons. In one year, cities and towns annexed nearly 31 percent as much land as they did during the 1980 to 1990 decade.

- The incorporation of Mill Creek in September 1983 and SeaTac and Federal Way in February 1990 added 23.4 square miles. The incorporated land area is now about 1,218 square miles, approximately 2 percent of the state's total land area.

- Three cities annexed over 5,000 persons during the 1980s: Kirkland, 16,467; Tukwila, 6,927; and Des Moines, 5,036. In some cases, all of the population growth in cities can be credited to annexations. Nearly half, 49 percent, of the 307,450 increase in incorporated population between 1980 and 1990 can be credited to annexations and new incorporations.

- Cities annexing the largest number of persons from 1990 to 1991 were: Winslow, 13,197 persons; Mukilteo, 5,855 persons; Yakima, 2,837 persons; and, Tukwila, 2,757 persons.

Notes: The county and municipal populations shown for 1990 are, with a few exceptions, the 1990 federal census Summary Tape File 1 counts. Some 1990 counts may differ from the federal counts due to the inclusion of annexations and provisional counts. See notes on next page.

(*) State Certified Special Census. A population and housing count that meets all special census certification requirements.

(#) Informal Count. A population and housing count that is considered accurate but does not meet all special census certification requirements.

(+) Informal Count. A population count that is considered accurate but does not meet all special census certification requirements.

($) These counts differ from the federal 1990 census count. See notes on next page.

With the exception of corrections to the federal census counts, annual estimates in this official series are not revised on the basis of other information that becomes available after the estimate date. As a result, population estimates shown for the individual years may not be comparable. Figures often vary due to data corrections or the use of new survey or census data that are not available on an annual basis. Revised county estimates are published regularly in the Components of Population Change Section.

OFM/Forecasting 7/91

******************************** NOTE ********************************

The Office of Financial Management (OFM) is responsible the for April 1, 1990 population determinations that are used for state revenue allocations to local governments and in all state programs requiring population as a criteria for funding and/or administration. Population counts used by OFM, in some instances, differ from the 1990 federal census counts. Differences are noted below:

I. Provisional corrections to the 1990 federal counts due to the misallocation of housing units and adjustment of Federal Way CDP boundary to the city boundary:

	--------FEDERAL--------				------CHANGE------			--------------REVISED-------------				
Municipality/County	Total Housing Unit	Vacant Housing Unit	Household Population	Group Quarter Population	Housing Unit	Household Population	Group Quarter Population	Total Housing Unit	Vacant Housing Unit	Household Population	Group Quarter Population	Total Population

Notes: With a few exceptions, the county and municipal housings units for 1990 are the federal census Summary Tape File 1 counts. Some 1990 counts may differ from the federal counts due to the inclusion of annexations and provisional counts. See notes with Table 3, page 16.

Housing unit estimates are revised on an annual basis to include the most current data available.

Notes: Annexed areas of less than 0.001 square miles are shown as 0.000 square miles.

All boundary changes are due to annexation unless otherwise noted.

Populations shown for Federal Way and SeaTac are the populations filed with the incorporation proceeding (RCW 43.62.030).

City Incorporations:

Mill Creek (Snohomish County), September 1983
Federal Way (King County), February 1990
SeaTac (King County), February 1990.

OFM/Forecasting 8/91

- Households, as defined by the Bureau of the Census, are occupied housing units. Housing units used on a seasonal basis are considered vacant even though they are occupied for part of the year.
- The number of households reported in Table 8 for 1970, 1980, and 1990 are census counts.
- Household growth has outpaced population growth for more than three decades. During the 1980s, households increased by 21.5 percent compared to a 17.8 percent increase in population. Since 1960, average household size has declined from 3.089 to 2.534 for 1990 and 2.529 for 1991.
- Washington's current population would require one-quarter less housing, 1.5 million households versus the present 2 million, if household size had remained at the 1960 level.
- Household size declines are the result of several social changes: fewer children per family, an increase in single parent families, increases in life expectancy with many widows and widowers living alone, and increases in age at first marriage and childbearing.

OFM/Forecasting 7/91

- Estimates of the population 65 years and over are developed from medicare enrollment data. The series from 1980 through 1990 has been updated to reflect the 1990 census count of persons in this age group.
- Person 65 years and older increased by 92,000 (28 percent) during the 1970s and 107,000 (25 percent) during the 1980s.

Note: 1990 age data will not match Summary Tape File 1A printed census reports. These data have been provisionally corrected due to a problem with the 1990 age question that resulted in about ten percent of the population misreporting their age as a year older. Detail may not add due to rounding.

OFM/Forecasting 7/91

- The elderly population continues to be one of the fastest growing segments of national and state population, increasing from 9.5 percent of the Washington's population in 1960 to 11.7 percent in 1990.
- Growth in this group will increase dramatically just after the turn of the century as the leading edge of the baby boom turns 65 years of age. As more people reach advanced old age, more personal, family, and governmental resources will be required to provide for their long term health care.

Note: See Note Table 9.

OFM/Forecasting 8/91

- o A considerable variation exists across counties in the proportion of residents 65 years and older. Whitman County, with its large university student population, has the lowest percentage of elder residents in 1990 (9.4 percent). Next is fast growing Snohomish County, also with 9.4 percent. Although this county's elderly population has doubled since 1970, rapid growth in the number of younger residents has kept its proportion of elders low.

- o In five counties, persons age 65 years and older comprise one-fifth or more of the population: Garfield, 22.1 percent; Pacific, 21.4 percent; San Juan, 21.3 percent; Jefferson, 20.5 percent; and Clallam, 20.3 percent.

OFM/Forecasting 8/91

- Washington's amenities attracts a considerable number of elderly and retired persons. Net migration gains for persons age 65 and over numbered 16,463 for the 1970s and 21,648 for the 1980s.

- Island, San Juan, Jefferson, and Clallam Counties had the highest rates in net inmigration for both the 1970s and 1980s with net decade gains of about 200 per 1,000 population in this age group.

OFM/Forecasting 8/91

- King County is the only large metropolitan county showing a net migration loss for persons age 65 and over. King County has shown this pattern of migration for five decades. Many King County residents retire to second homes in Island, San Juan, Jefferson, and Clallam Counties.

- Pacific County was one of eleven counties showing a net migration loss for persons age 65 and over for the 1970s, but ranks eighth in terms of net gains for the 1980s. Migration gains for persons age 65 and over represent about 30 percent this county's total migration gains for the 1980s.

OFM/Forecasting 4/91

- The 1991 population figures shown for cities, towns, and counties include approximately 119,900 persons living in group quarters facilities. Of this total, 12,554 persons reside in state and federal correctional institutions, long term care facilities for the mentally or physically disabled, and veteran homes.
- Counts of the resident population in institutions that are under state or federal jurisdictions are relatively easy to obtain and often identify a major source of population change for local governments.

Note: These counts include persons in state and federal mental and penal insitutions, veteran's homes, and schools for the deaf, blind, and retarded. These counts exclude persons in adult correction work release facilities, diagnostic centers, and group homes.

OFM/Forecasting 4/91

- The selected institutional populations shown in Table 12 represent approximately ten percent of the state's total group quarters population. Other group quarters populations that are a source of local area population change include persons living in nursing homes, college dormitories, and military barracks or ships.

- In 1990 there were 120,531 person counted in group quarters. The slight decline in 1991 was largely due to overseas deployment of the military group quarters population.

Note: Data from 1981 to 1991 are estimates.

OFM/Forecasting 8/91

- Table 13 shows estimates of the resident armed forces personnel in Washington. These estimates are developed from federal census data, station strength counts published by the United States Department of Defense, and information provided by the major military installations in Washington.

- Resident armed forces personnel are persons on active duty with the United States Army, Navy, Air Force, Marine Corps, and Coast Guard. It includes personnel residing on or off base and those in group quarters living arrangements, such as barracks or ships. Figures for resident armed forces usually compare well with Defense Department tabulations of station strength. The dependents of military personnel are excluded from these tabulations.

Note: Data from 1981 to 1991 are estimates.

OFM/Forecasting 8/91

- Over the last two decades, Washington's resident armed forces personnel have generally numbered between 50,000 and 60,000, with a gradual increase occurring during the 1980s.

- Resident armed forces personnel are included in the resident population counts and estimates for state, counties, and local governments. Specific rules established by the Bureau of the Census are used to determine where shipboard and other large transient military populations are counted.

- The marked decline in armed forces from 60,850 in 1990 to 54,505 in 1991 is partially due to the temporary deployment of personnel to the Persian Gulf on April 1, 1991.

- Changes in armed forces personnel often cause noticeable changes in the state and local area populations. This is particularly true for naval port cities, such as Bremerton, that are subject to large differences in shipboard populations.

OFM/Forecasting 8/91

- Per capita income is calculated by dividing total personal income by total resident population.

- "Personal Income" is the definition of income used by the U.S. Department of Commerce, Bureau of Economic Analysis (BEA). By comparison, "Money Income", the definition of income used by the Bureau of the Census, does not include some of the components of "personal income" such as employer paid pension and medical benefits.

- Personal income estimates at the county level are produced annually by the BEA with a two year lag in the data series. The estimates are based on administrative records such as wage data from Employment Security Department reports and Social Security Administration records of payments of old age, survivors, and disability insurance.

- Estimates of median household money income usually presented in *Population Trends* will be published in 1992. Data needed to develop current estimates are not yet available.

1987	4,527,100	43,503	9.61	27,216	6.01
1988	4,616,900	44,922	9.73	26,241	5.68
1989	4,728,100	45,278	9.58	27,140	5.74

Notes: Corrected census counts for 1970 and 1980. The 1981 through 1989 state population estimates were revised on the basis of the 1990 federal census data.

The marriage/divorce rates are marriages/divorces per 1,000 population.

Marriages and divorces are calendar year data. The 1950 data are licenses issued; the other data are marriages performed.

1990	1,151,604	76,068	66.05
1991	1,179,409	76,893	65.20

Notes: The general fertility rate is births per 1,000 women 15-44 years.

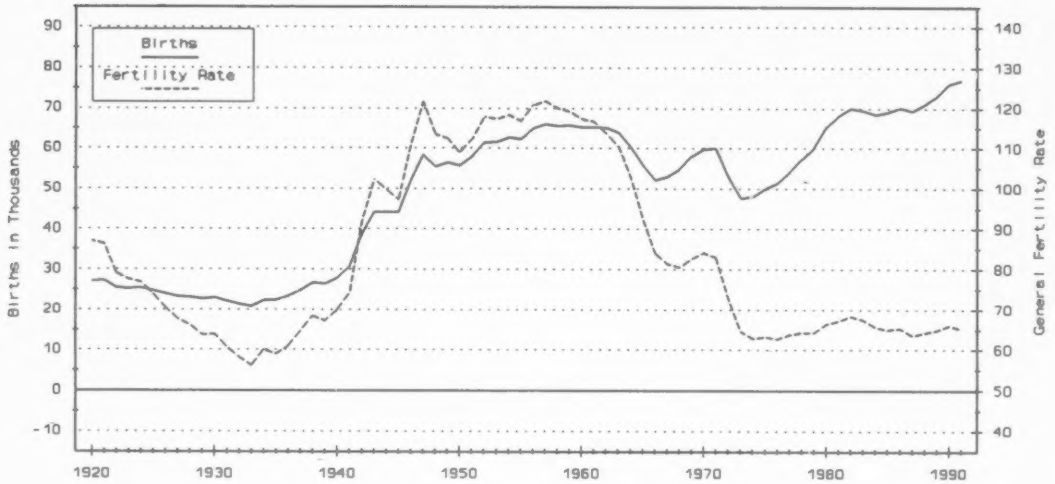
Calendar year figures for 1930 to 1960; April-to-April figures for 1961 to 1991.

Corrected census counts for 1970 and 1980.

Births are estimated for January 1990 through March 1991.

OFM/Forecasting 8/91

Figure 3
Births and Births per 1,000 Women 15-44 Years
State of Washington, 1920 to 1991



- o The number of annual births in Washington reached an all time low of 20,882 in 1933 at the depth of the Depression. The average number of births per woman, a measure of the number of births the average woman would have during her childbearing years, was only 1.6.

- o At the height of the Baby Boom, calendar year births approximated 65,000 per year and average births per woman reached 3.7.

- o The early 1970s are characterized as the Baby Bust. In 1972, the annual number of births fell below 50,000 for the first time in 25 years. In 1975, the average number of births per woman, 1.7, approached the 1933 low.

- o Fertility rates have remained low due to increased female labor force participation, an increase in the age at first marriage, delayed childbearing, and an increase in divorce rates. Annual births have averaged about 69,000 to 70,000 throughout the 1980s because of the large number of women of childbearing age. Average births per woman edged up over the decade.

- o By 1989, calendar year births increased to 76,000 with a total fertility rate of 1.98, just under the average of a two child family. The current increase in births is largely due to increases in fertility to women over thirty who are now having their delayed first or second birth.

Note: The above age data differs from Bureau of the Census Summary Tape File 1A reports. Provisional corrections have been made for age misreporting due to the problem with the census age question. Use caution with the 0-4 age data. All ages contain a portion of population reported in the next higher age grouping.

Woodland	2,500	2,441	59	979	944	35	2.5858	0.9642	0.0358

* These counts differ from the federal Bureau of the Census Public Law 94–171 counts, see notes with Table 3.

** For split cities (except Coulee Dam), the citywide vacancy rate was assumed for city parts.

Note: See notes Table 3, page 17. Population and housing unit changes due to the misallocation of housing units received from the federal Bureau of the Census will be included in OFM figures as they are received. Table revision dates will be clearly indicated.

WASHINGTON STATE DATA CENTER
STATE AND COUNTY PROFILES

Washington State Data Center
And Business and Industry Data Center

The Washington State Data Center and Business and Industry Data Center represent federal-state cooperative programs sponsored by the U. S. Department of Commerce, Bureau of the Census. The Office of Financial Management (OFM) is the state agency responsible for administering these programs in Washington State.

The Washington State Data Center (SDC) was initially established in 1981 as the state's official repository for census statistics. In July 1988, Washington was selected as one of fifteen SDCs to pilot the Business and Industry Data Center Initiative. This program, now nationwide, is designed to increase the availability of population and economic data to decision makers in the economic development and private sectors.

A list of the Washington SDC coordinating agencies and affiliate members is provided on the following pages. These organizations and contact persons play an important role in the release of early 1990 census information. All members have a wide range of Bureau of the Census 1990 census data releases and summary data releases developed and distributed by OFM. Many of the larger participating universities, regional councils of governments, and county planning agencies have developed their own publications suited to supply the data most requested by local constituents. Several organizations provide specialized computer processing to meet individual data needs.

An eight page profile for the state and a one page profile for each county from the 1990 census Summary Tape File 1A are provided in this section. The table format used for the county profile was developed by the Puget Sound Council of Governments with housing data additions made by OFM. Detailed eight page profiles for cities and counties were distributed by OFM to all SDC members, including the libraries. Please contact your local affiliates for these census data.
